

Infant non-invasive interfaces guide

for neonatal and paediatric respiratory support

Critical Care ▪ Infant non-invasive interfaces

Infant non-invasive interfaces

Safety and comfort are vital to help infants with their earliest steps in life. Intersurgical offer a range of patient interfaces specifically designed to provide non-invasive respiratory support for the smallest and most sensitive patients.

The Intersurgical portfolio includes solutions for Nasal High Flow (NHF), Continuous Positive Airway Pressure (CPAP) and Non-invasive Ventilation (NIV) therapies, for a range of patient sizes, from the smallest neonates to pre-adolescents.

Weight guide (kg)	0	5	10	15+
NHF	 Nasal Cannula			
CPAP	 nFlow™	 CaStar Infant	 CaStar Ped	
NIV			 BiTrac MaxShield Select™	 MiniMe®2
				 CaStar R Ped

Non-invasive ventilation is used to support a wide range of infant respiratory conditions, however one of the most common applications for children under 2 years old is treatment of acute bronchiolitis. Intersurgical have an extensive range of interfaces suitable for supporting this age range.

Treatment of bronchiolitis in infants

The smallest patients can be affected by an acute bronchiolitis. Management of bronchiolitis focuses on supportive care, such as ensuring adequate hydration and providing supplemental oxygen when needed.

Bronchiolitis predominantly affects children under 2 years of age, with the highest incidence occurring during the first year of life, out of every 1,000 children under 2 years of age, about 5 will require hospitalisation. Bronchiolitis usually follows a seasonal pattern, with most cases occurring in the autumn and winter months, although occasional cases may occur throughout the year.⁽¹⁾

Nasal High Flow (NHF)

Nasal cannula

The infant nasal cannula for high flow range is available in 4 prong sizes and is suitable for flows up to 10 L/min. The cannula includes a 15M connection for use with active humidification, or an optional adaptor for use with oxygen tubing.

Colour coding
to allow quick and easy
identification of the correct size

Code	Description	Colour	Box Qty.
51008533	Nasal cannula, extra large infant	Orange	10
51008531	Nasal cannula, large infant	Blue	10
51008530	Nasal cannula, medium infant	Green	10
51008529	Nasal cannula, small infant	White	10

Continuous Positive Airway Pressure (CPAP)

Nasal CPAP – nFlow™ CosyFit

The Intersurgical nFlow™ system offers a complete care solution for infant CPAP with established 'gas flip' technology, providing a low 'work of breathing' option as an alternative to ventilator CPAP. The CosyFit bonnet makes attaching the generator simple and precise and helps create a secure yet gentle fit for even the most sensitive patients.

Tube support

Lightweight and secure design for easy positioning and adjustment

Bonnet tie

Soft and strong to maintain a comfortable and reliable fit throughout treatment

Bonnet

Available in 12 sizes, the breathable cotton nFlow CosyFit bonnet includes 3 large attachment pads to help ensure a gentle and cosy fit for the smallest to largest patient.

We've made ordering easy. To make a complete system you can choose one product from group A and B, and choose a patient interface from C and/or D. At any time you can order separate items according to your needs.

Hood CPAP

CaStar Infant hood

The CaStar Infant hood is a comfortable, versatile and lightweight CPAP patient interface for infants. It is designed to offer an alternative to traditional methods of CPAP delivery. The CaStar Infant hood is well tolerated for extended periods and can reduce the risks associated with both endotracheal intubation and face mask use. It is available in two sizes, providing an ideal option for CPAP therapy for a range of patient sizes.

CaStar Infant hood for CPAP therapy with inflatable headrest, bi-directional anti-asphyxiation valve and patient access port

Code	Description	Patient weight	Box Qty.
CP200INFHI/2	CaStar Infant High for CPAP	7 - 12 kg	5
CP200INFLO/2	CaStar Infant Low for CPAP	3 - 7 kg	5

CPAP and Non-invasive Ventilation (NIV) patient interfaces

Hood CPAP and NIV

CaStar Ped paediatric hood

The CaStar Ped is the hood interface for paediatric patients above 12kg weight. This size hood is available in both configurations for CPAP and NIV to offer a comfortable solution for your patients needs. The CPAP design features a built-in manometer and is used with a PEEP valve, while the NIV version connects to the mechanical ventilator.

Total Face Mask CPAP and NIV BiTrac MaxShield Select™ paediatric

Our total face mask for paediatrics, the BiTrac MaxShield Select, avoids the nose and disperses pressure over a larger surface area while reducing claustrophobia for the patient. The two paediatric masks feature soft touch bonnet headgears that have been specifically designed for each size, to gently stabilise the masks on the smallest patients. Our interchangeable elbows greatly reduce waste since you can easily remove and replace the mask's elbow when transitioning patients between standard ventilators and bilevel machines.

Size guides included

BiTrac MaxShield Select™ paediatric total face mask with interchangeable vented elbow with anti-asphyxiation valve

Code	Description	Colour coded elbow	Box Qty.

Nasal Mask CPAP and NIV

MiniMe[®]2 featuring AIR^ogel[®] technology

The MiniMe[®]2 mask is a single-patient use nasal NIV mask for use in the hospital or homecare environment, with service life of six months. MiniMe[®]2 is available in four sizes, both with vented and non-vented options. Designed for children ages 2-12, the MiniMe[®]2 mask features AIR^ogel[®] with Advanced Cushion Technology[™] and Custom fit technology, providing your smallest patients the ultimate fit and maximum comfort.

Custom fit technology

The shell and cushion of the mask can easily be moulded to fit individual needs. Once fixed it will hold its position

AIR^ogel[®]

The AIR^ogel[®] makes the MiniMe[®]2 a gentle fitting mask

Advanced Cushion Technology[™]

The ergonomic cushion technology delivers an effective seal for the most comfortable fit

Touchless Spacebar[™]

Unique design eliminates any contact with the patient's forehead

Size indicator

The masks are available in four sizes, from extra small to large

Vented and Non-vented versions available

For CPAP and bilevel therapy in children

360° rotating elbow

For optimal tube positioning and easier mobility
