i-Pro™ PPE mask

Designed for clinicians, working in the clinical environment.

Intersurgical has developed, manufactured and supplied innovative respiratory and filtration solutions into the healthcare setting for over 30 years. This expertise has allowed us to design a FFP2 mask specifically for clinical personnel.

Traditional personal protective masks were originally designed to be used in the industrial environment and are therefore not always suited for the population of healthcare workers, this has resulted in a number of reported issues.

The i-Pro mask has been designed with clinicians in mind. Using our breathing system filter media, with proven bacterial and viral efficiency in the clinical environment, and a soft, flexible TPE seal, featured in our range of respiratory products, the i-Pro mask combines a high level of protection with a comfortable and effective fit.

Dependent upon the type of mask, and where it is intended to be used, there are a variety of methods used to determine the overall effectiveness. The level of protection that a mask provides will be dictated by three key functional elements:

1. Filtration efficiency
2. Quality of the face fit
3. Comfortable protection

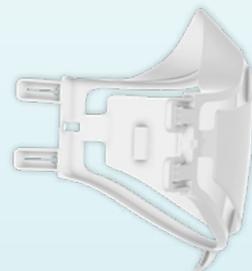

Soft, flexible seal

Filter media

Protective shield

i-Pro™ PPE mask - FFP2

Unique flexible seal

Helps to provide an effective and comfortable fit to the wearer's face

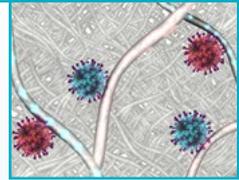

Protective shield

Additional protection from droplets and aerosols

Proven protection

Bacterial and viral filtration proven in the clinical environment

Safe and secure

Four point fixation system provides safe and secure positioning

Flexible chin seal

Helps to improve mask positioning and stability
